

testing::Test

testing::WithParamInterface< int >

testing::TestWithParam< int >

NamingTest

```
graph BT; NT[NamingTest] --> TWP[testing::TestWithParam< int >]; TWP --> T[testing::Test]; TWP --> WI[testing::WithParamInterface< int >];
```

The diagram illustrates the relationship between four classes in the Google Test framework. At the bottom is the `NamingTest` class. An arrow points from `NamingTest` to `testing::TestWithParam< int >`, indicating inheritance. From `testing::TestWithParam< int >`, two arrows point upwards: one to `testing::Test` and another to `testing::WithParamInterface< int >`, indicating that `TestWithParam` inherits from both of these base classes.
